Subject: Transition POCs - request for your review for multi-regional cases in case summaries chart

Hey all - there was supposed to be a scrub of the summaries listing for the cases that were multi-regional, but were only listed by one region (or fewer than all) and/or did not otherwise indicate that the case involved more than one region. Apparently, that scrubbing didn't take as Kellie identified several air multi-regional air cases that weren't described as such. As a result, I am asking each of you to do the following:

1. Please review the case summary chart on the sharepoint site to identify the multi-regional cases in your program areas.
2. If you find any, please print out the relevant page(s) from the chart and hand-mark any needed revisions to summary to reflect that it's a multi-regional case, and also the regions involved.
3. Please give your hand-marked copies to Caroline. Susan S is going to review them before they get passed on for correction. You do not need to make the correction directly to the case summary chart on the sharepoint site (there will be a different process for getting these corrections made).
4. The sooner you can do this, the better, but please **by no later than COB next Tuesday** (to give Susan time to review).
5. If there are no multi-regional cases in your areas, or if any multi-regional cases are correctly listed and described, please also report that to Caroline so that we know things are hunky-dory.

THANKS!

PS - please try to avoid "checking out" the case summary when you access it from the sharepoint site, as that locks it. (There may also be a glitch in the system that's doing this, but just in case!).
